## Sr. Program Manager - IT Infrastructure Transition

Location - Anywhere USA  
Job Number: 71106-2502

### Position Description

Highland Partners Consulting LLC is an IT professional services company delivering IT solutions across a broad spectrum of industry groups. We are interested in candidates that are eager to support our team as we take on the tough challenges of our clients' complex IT infrastructure needs. All candidates must appreciate and support a strong values system and adhere to conduct above reproach. At Highland Partners, we value our team members and provide rewards that are commensurate with contributions.

The senior program manager in this role is accountable for our clients' successful IT infrastructure transitions from current state to future state. Candidates must have a long history of successful program management experience involving large and complex programs of work. Leadership skills is a must have. This role requires leading and motivating multiple project teams that include direct and indirect team members, vendors, and partners. The position requires the ability to collect requirements from the client, organize the project team, develop the plan, skillfully implement the plan, and shutdown the program according to key success factors. Travel is expected to be 75% on average.

### Required Skills and Experience

- Experience transitioning from a current state operating model to a future state operating model with emphasis on infrastructure
- Proven ability to lead multiple vendors in achieving strategic goals
- Strong organization and coordination skills, as well as attention to detail
- Effective communication skills with executive and technical levels
- Must manage scope, schedule, resources, and financials according to plan
- Proficient at using a well known project management tool
- Must have strong client interfacing skills, including executive presentations
- Seven to ten years experience managing large scale projects
- Experience managing projects of high complexity
- Ability to lead teams without having direct line management authority
- Ability to react quickly to changing requirements or circumstances
- A long track record of verifiable project success

### Preferred Skills and Experience

- Experience working in an outsource service provider's environment
- Experience in one or more technical domains
- Data center operations experience
- Experience with MS Project and/or MS Project Server 2003
- Project management certification

*This position could be contingent upon newly signed business. This position could be subject to a 1099 work arrangement.*
